Fortion® IMINT KDB®

Identify Ground Infrastructure Instantly

AIRBUS

Fortion® IMINT KDB®

Boosting infrastructure recognition

Fortion® IMINT KDB® (Image INTelligence Knowledge Database) enables the smart management of knowledge within an Intelligence organisation.

Enhancing intelligence analysis with a cutting-edge image recognition tool

Cutting-edge image recognition tool, Fortion IMINT KDB is based on an efficient database structure and rich content including recognition keys. It supports the image analyst in the recognition/identification of specific infrastructures on satellite or aerial imagery, leading to a better situational assessment for intelligence reports.

Collecting and sharing information

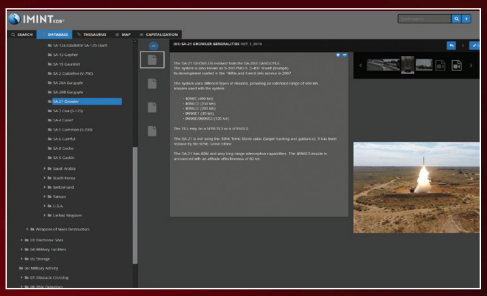
Fortion IMINT KDB provides a powerful set of tools to collect, save, organise and share knowledge. It enables close and efficient cooperation among teams thanks to distributed knowledge via a secured platform. The solution offers a significant reduction of costs and time constraints through rapidly accessible data.

Powerful knowledge capitalisation

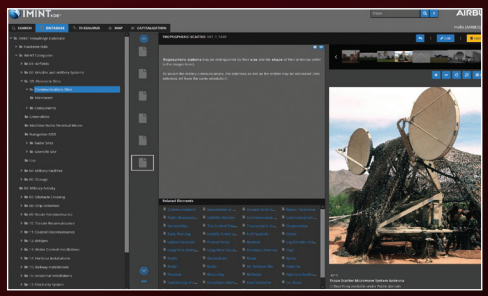
The knowledge database is fully dedicated to daily image analysis and is structured into a media library (documents, animations, images, extra collections, and other media).
It enables easy and continuous improvement of the database thanks to successive and optimised capitalisation of knowledge, allowing the image analyst to enrich the database with new content (image capture, process or methodology description, comments…).

20 years of experience

IMINT KDB® is a sophisticated solution, designed according to operational user feedback and based on more than 20 years of experience within image intelligence.
In order to ensure continuous improvement of recognition performance, it enables initial training of beginners or lifelong training of experts.



Growler Generalities



Tropospheric communications antennas

Key Features

- Support for the recognition and identification of infrastructures from satellite or airborne images
- Data provision for the creation and illustration of intelligence reports
- Tools to collect, save, organise and share knowledge
- Comprehensive database with more than 2,500 elements available (2GB of media)
- Efficient and powerful search tool

Key Benefits

- **Interoperability:** infrastructure and mobile target recognition with Fortion RECCE Engine
- **Time and cost savings:** significant reduction of time and cost constraints
- **Data excellence:** evolutionary database thanks to smart completion of characteristics and import of specific content
- **Accessibility:** intuitive and user friendly man-to-machine interface
